

Preparing for PG&E Power Outages: Plan Ahead and Don't Get Caught Off-Guard

Planning Ahead Can Save Thousands in Business Interruptions and Keep You Ahead of Your Competition

Unfortunately, for the foreseeable future, power outages will become a more frequent problem for PG&E customers. DSI can assist your organization in planning ahead to avoid business interruptions with reliable back-up power. DSI can work with you on any type of UPS or Generator back-up system that makes sense for you, whether it's a permanent installation or temporary protection.

From start to finish, DSI consults with you to provide a specific assessment of your electrical system, helps you decide which electrical loads MUST be protected, and works with you to determine what level of investment is best for your organization.

No project is too big; no project is too small.

DSI OFFERS:

Design Services

Consulting Services (including Assessments, Site Evaluations and Energy Efficiency Studies)

Electrical Installations (including Generators)

General Construction Services

Professional Support for all Generator Manufacturers

Preventative Maintenance and Service Plans

Let DSI be a valuable partner to your organization. Let us get involved BEFORE there is a problem. We are here to help!
